Ampyield is a complete gut health package for calves. Establishing gut health and development in calves is essential for building a foundation of performance and profitability. Healthy animals will eat and produce more efficiently, ensuring that they achieve their maximum potential. Ampyield focuses on supporting animal performance by promoting good bacteria and limiting bad bacteria, all while building immune defenses and maximizing efficiency.

**Strengthen your calves’ foundation**

Once born, calves face a high-risk period of two to three weeks before their immune system fully activates. As such, it is critical never to let your calves go unguarded during the early stages of their lives. Ampyield is an extra line of protection that can help you reap major benefits in the long-term productive life of your herd.

**Ampyield supports the development of immunity during the high-risk period**
