

Calf products

Their future starts here

BLUELITE[®] C For CALVES

by TechMix

An acidified electrolyte supplement to hydrate beef calves.

- Provides acidified electrolytes and readily digestible energy
- To enhance digestion and optimize nutrient performance
- Ease the transition to weaning
- Encourage water intake and maintain hydration
- Designed to help reduce shrink and dehydration in young calves

BLUELITE[®] Replenish^M For Calves

by TechMix

BlueLite[®] Replenish^M is a liquid, buffered calf electrolyte formulated for scouring calves.

- Recommended for use during all stages of scours
- Meets oral rehydration specifications of Dr. Geof Smith, DVM, PhD, ACVIM
- Facilitates sodium absorption
- Produces energy
- Maintains low abomasal pH to decrease incidence of infection
- Convenient liquid form with no mixing required
- Shelf stable

CALF PERK[®] by TechMix

A supplement to help support calves.

- Use at birth for newborn calves that need a boost
- After a difficult birth
- During cold temperatures
- For depressed, lethargic received calves
- Enhance calf suckle reflex and vigor

Calf Restart One-4[®] by TechMix

A supplement containing highly digestible hydration for young beef calves.

- Encourages weight gain
- Promotes feed intake
- For energy deficient and dehydrated calves
- For malabsorption during scours
- Helps balance the digestive system using beneficial bacteria
- When calves look too weak to drink
- To enhance post-treatment recovery

At TechMix we realize the importance of hydration.

What we believe

We believe hydration is the single most important component to the well-being and performance of your animals.

We believe that during stress events, animals don't drink enough water – leading to dehydration – and don't consume enough critical nutrients.

We believe hydration innovation is a critical component to your success.

Who we are

We are TechMix. Hydration is in our DNA.

We are TechMix. We invented BlueLite – and from this technology platform, we develop products to meet the ongoing needs of producers - both today and in the future. BlueLite is the first hydration product to address the specific needs of individual species including swine, beef, dairy and companion animals.

We are TechMix.

IMPROVING QUALITY
AND PERFORMANCE

Rehydrate. Recover. Perform.

The importance of hydration

Bovine BlueLite® helps cattle to rehydrate in times of stress, such as upon arrival to feedlots, during periods of heat stress, and prior to shipping. When cattle suffer from dehydration, potassium is the first electrolyte that is excreted. As a high potassium electrolyte, Bovine BlueLite provides cattle with a source for quick replacement. Producers have seen increased profitability by using Bovine BlueLite as a way to improve carcass quality, reduce shrink loss, and improve meat quality.

BOVINE BLUELITE®

by TechMix

Directions for Use: To mass treat calves on arrival, add Bovine BlueLite to water, in the ration, or top dress on feed.
Drinking Water: Mix 2 pounds in 128 gallons of drinking water. For individual cows, provide 2 oz per head per day.

BOVINE BLUELITE® PELLETS

by TechMix

Directions for Use: Top dress, or mix into the ration or grain portion of the beef ration to provide 4 to 8 ounces per head per day during hot weather, or anytime dehydration is a risk. Feed 1 pound per head per day, for 2 days, to cattle about to be shipped, or newly received.

BOVINE BLUELITE® 2Bw

by TechMix

With beneficial bacteria
 Available in: Case of 8- 6.25 lb bags

Easy administration with 2 Bovine BlueLite PRODUCT FORMS available to fit any farms management needs.

Powder - Available in:
 50 lb. box, 6 lb. box,
 2 lb. bag and 1.25 lb. jar

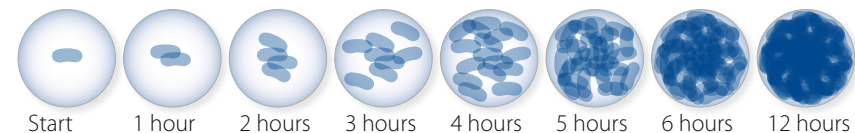

Pellets - Available in:
 50 lb. bag

Rumen Yeast Caps

by TechMix

Contains 30 billion colony forming units of live yeast, and the veterinary recommended dose of 6 grams of niacin which helps develop and maintain optimum rumen fermentation and maintain proper liver function. Rumen Yeast Caps help stimulate appetite and dry matter intake.
Directions for Use: Give one capsule daily for 2-3 days in succession after arrival in the feedlot or whenever feed or dry matter intake drops below normal as a result of hot weather or environmental changes.

Beneficial bacteria that replicate every hour!

Because the live yeast in Rumen Yeast Caps is manufactured for extended viability, it is able to replicate every hour - populating the gut to help reduce the chance of acidosis and aid digestion along with overall gut integrity.
