

Series of **4 protocols** to help the **challenged calf thrive.**

In developing the product line for our Scouring Calf Protocol, we worked with industry experts to innovate products to specifically meet the needs of the calf from the onset of scours through recovery.

Scouring
Calf Protocol

Dystocia, severe stress events, and disease can leave a calf weak and lethargic. Our product protocol energizes calves and provides nutrients to help them recover and thrive.

Newborn/Weak
Calf Protocol

Transporting calves can restrict their access to water and feed for extended periods of time, expose calves to potential pathogens and comingling with others of varying health status. Rehydration and digestive system preparation is the root of our protocol.

Transported
Calf Protocol

Weaning is a stressful time that causes nutrient disruption as calves are transitioned to different diets in new environments. Our protocol is designed to support digestive integrity.

Weaning Support
Calf Protocol

Supplementation Protocols

TechMix product technologies are designed to meet the specific health challenges a calf encounters—specific for each event and level of challenge. Nutrient combinations of electrolytes, energy sources, and direct fed microbials are science-designed for optimal absorption and utilization.

Product	Benefit	Protocol
	<p>Calf Renova helps to reduce harmful bacteria, enhance intestinal microflora and encourage dry matter intake any time normal digestive health has been interrupted.</p>	
	<p>Provides oral rehydration with optimum buffering sources, and supplements nutrients lost during scours or that are required for persistently lethargic calves.</p>	 
	<p>Calf PreRD® uses live yeast, DFM, MOS, and amino acids to help improve gut integrity and promote a more desirable digestive environment.</p>	  
	<p>Calf Restart® One-4 contains electrolytes, amino acids, plasma proteins, beneficial bacteria, and multiple sources of energy in a readily digestible milk base.</p>	
	<p>Calf Perk® provides an immediate energy boost for depressed or weak calves by helping increase their ability to stand and their suckle reflex.</p>	
	<p>BlueLite® C is a palatable, acidified, energy-rich electrolyte designed to combat metabolic, hydration and digestive challenges.</p>	
	<p>Provide palatable and convenient, Liquid BlueLite® C for readily digestible energy and electrolytes any time hydration support is needed.</p>	
	<p>Bovine BlueLite® Pellets provides electrolytes with multiple energy sources formulated to rehydrate the stressed calf and promote a healthy digestive environment.</p>
