Scour Bos[®]

*Scour Bos[®] delivers in ways
the competition can't*

PREG-CHECK. PROTECT.

For powerful protection at
preg-check, there's only one.

Elanco

What is scours?

Scours, or calf diarrhea, is a common result of bacterial and viral infections in the lining of calves' intestines.

- Calves are especially vulnerable because they face many stressors in the first few hours of life, and their young immune systems have not yet fully developed.
- Infected calves can quickly infect other newborn calves in close proximity.
- Calves that suffer from scours are less likely to catch up and reach full potential, if they survive at all.

PREG-CHECK & PROTECT

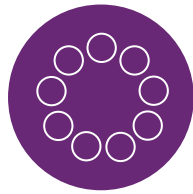

SCOUR BOS IS THE ONLY SCOURS VACCINE THAT DELIVERS POWERFUL PROTECTION WITH THE CONVENIENCE AND FLEXIBILITY TO ADMINISTER AT PREG-CHECK.

16-WEEK INITIAL VACCINATION WINDOW

Scour Bos® can be administered up to 16 weeks pre-calving, providing the longest vaccination window of any scours vaccine.

- Flexible, convenient administration at preg-check saves time
- More time for heifers and cows to build up antibody-rich colostrum that fosters protection against scours-causing pathogens
- Healthier, more resilient calves

9 ANTIGENS

Nine antigens for broad-spectrum protection against:

- Coronavirus
- *Clostridium perfringens* Type C
- Four isolates of K99 *E. coli*
- Three rotaviruses: G10, G8 and G6

3-WAY ROTAVIRUS

Scour Bos is the only three-way rota on the market.

4 E. COLI ISOLATES

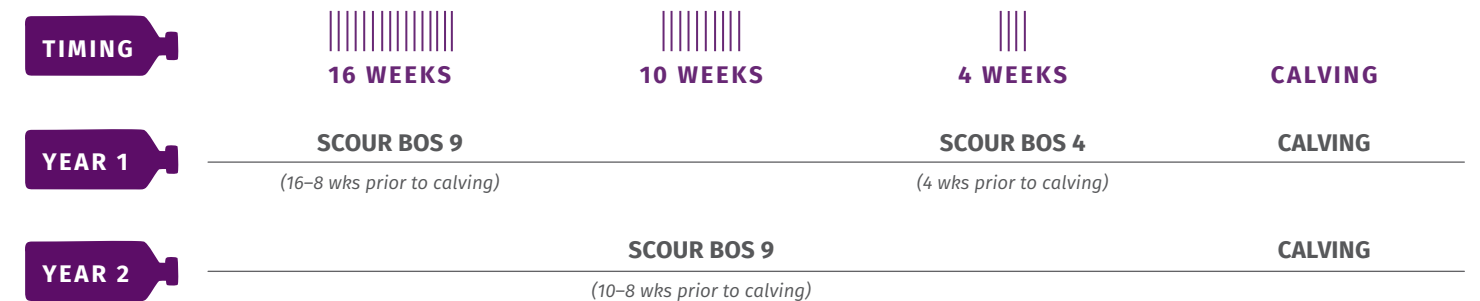

Includes more *E. coli* isolates than any other scours vaccine.

PROTECT CALVES AND PROFITS WITH SCOUR

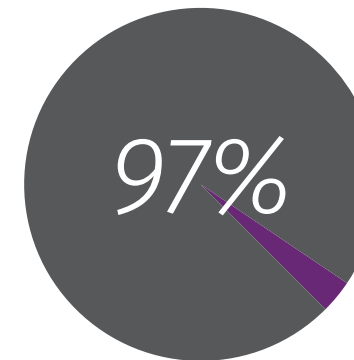

- Prevention is essential to any herd health strategy
- Combined effects of scours — death loss, treatment costs and poor performance — can add up to thousands of dollars in losses each year
- Vaccinating with Scour Bos helps calves reach maximum lifetime value and contribute more profit to the operation

CONVENIENT, ECONOMICAL VACCINATION

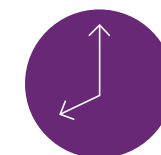

SCOUR BOS ADMINISTRATION — VACCINATE AT PREG-CHECK

*Booster dose of Scour Bos 4 at four weeks prior to calving is required the first year.

97% OF VETERINARIANS WHO USED SCOUR BOS SAID IT MET OR EXCEEDED EXPECTATIONS, DESPITE SEVERE WEATHER.¹

FOR PROTECTION AT PREG-CHECK AND BEYOND, YOU NEED SCOUR BOS

- Scour Bos' formulation provides a smooth, safe vaccine
- Allows more time for heifers to build up colostrum and maximize colostrum antibodies
- Economical choice
- Available in 10- and 50-dose vials
